### ***Green Fence Perimeter***

**Need:** Safety perimeter around the Caldwell camp property “Los Domos”.

**Task:** Fortify existing barbed wire cow fence by planting a “green fence.”

**Procedure:** Using rooting hormone propagate 600-900 thorn tree/bush cuttings and place every 2 feet along 1800 feet of perimeter. Water. Mulch.

#### **Material to Bring:**

- Rooting hormone

#### **Detail:**

- Property is rectangular shaped on a hillside measuring approximately 300 feet by 600 feet.
- Using knives or pruning shears cuttings of the thorn plant are to be attained from adjoining properties.
- Cutting, digging and planting tools are at Loma.
- White cedar has been planted every six feet on over half of the perimeter.
- The soil though lacking in nutrient is very tillable and void of stone.
- Thorn plant is to be planted between the cedar and among their branches.
- Dead sticks, up to a couple of feet deep, will need to be cleared before planting on about half of the perimeter.
- The same dead sticks can be used for mulch in addition to sawdust.
- Estimation of planting time: 6 man-days. Placing sawdust and mulch may require another 3 man-days.
